ACKNOWLEDGMENTS

Many individuals assisted in the preparation of this report. I thank Hal Summerson for assistance in researching the literature, collecting and analyzing samples in the northern part of the APES system, performing the digitizing, and constructing the data files that are to be part of the Land Resources Information Service, North Carolina Department of Environment, Health and Natural Resources (DEHNR). Others involved in various stages of sample collection and analysis included Jesse McNinch, Seok-Yun Kim, and Blair Larsen. Several of the ideas concerning sediment deposition and accumulation resulted from thoughtful discussions with Dr. Larry Benninger, Department of Geology, University of North Carolina at Chapel Hill. Tom Tribble and Zolt Nagy of N.C. DEHNR assisted in preparation of the maps and in archiving the data in a useful fashion.
